Sequence 29922, Application US/09531113

GENERAL INFORMATION: Sceeph R.

APPLICANT: Byrux, Joseph R.

APPLICANT: La Rosa, Thomas J.

TITLE OF INVENTION: Nucleic Acid Molecules And Other

TITLE OF INVENTION: Plants

FILE REFERENCE: 38-21(15761)B

CURRENT APPLICATION NUMBER: US/UJ/531,113

CURRENT APPLICATION NUMBER: US/UJ/531,113

CURRENT APPLICATION NUMBER: US/UJ/531,113

CURRENT APPLICATION STATE

FILE REFERENCE: 3000-03-22

NUMBER OF SEQ ID NOS: 48629

SEQ ID NO 03322

LENGTH: 528

TYPE: DNA

ORSHANSM: Glycine max

OTHER INFORMATION: Clone ID: jC-gmst02400009h05d1

Sequence 1451, Application US/09565309A
GENERAL INFORMATION:
APPLICANT: ALEXANDROV, Nickolai
APPLICANT: BROVER, Vyacheslav
TITLE OF INVENTION: SEQUENCE-DETERMINED DN
TITLE OF INVENTION: THEREBY
FILL REFERENCE: 2750-0853P
CURRENT APPLICATION UNMER: US/09/565,309A
CURRENT FILING DATE: 2000-05-05
NUMBER OF SEQ ID NOS: 68449
SEQ ID NO 1451
LENGTH: 631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TYPE: DNA

APPLICANT: AEXALIDATOR, VICKOLAI
APPLICANT: BROVER, Vyacheslav
TITLE OF INVENTION: SEQUENCE-DETERMINED DNA FRAGMENTS AND CORRESPONDING POLYPEPTIDES
TITLE OF INVENTION: THEREBY
FILE REFERENCE: 2750-0853P
CURRENT APPLICATION NUMBER: US/09/565,309A
CURRENT APPLICATION NUMBER: US/09/565,309A
CURRENT FILING DATE: 2000-05-05
NUMBER OF SEQ ID NOS: 68449
SEQ ID NO 1449
LENGTH: 456
TYPE: DNA
ORGANISM: Arabidopsis thaliana
FEATURE:
NAME/KEY: misc_feature
LOCATION: (1) . (456)
OTHER INFORMATION: any n = a, g, c, t, unknown, or other
NAME/KEY: misc feature
LOCATION: (1) . (456)
OTHER INFORMATION: 1916:36727 (Clone Number: Unique Sequence Identifier)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 15

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 4582, Application US/09960352

Patent No. US20020137139A1

GENERAL INFORMATION:
APPLICANT: Warren, Wesley C.
APPLICANT: Warren, Wesley C.
APPLICANT: Marthalagan, Nagappan
APPLICANT: My Nengbing
APPLICANT: Mathalagan, Nagappan
TITLE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION: AND
TITLE OF INVENTION: MUSCLE AND FAT DEPOSITION
FILE REFERENCE: 16511.006/37-21(10298)C
CURRENT APPLICATION NUMBER: US/09/960,352
CURRENT FILING DATE: 2001-09-24
NUMBER OF SEQ ID NO4582
LENGTH: 393
TYPE: DNA
ORGANISM: Bos taurus
OTHER INFORMATION: Clone ID: 20-LIB3057-013-Q1-K1-E7
                                                                                                                                                                                                         Ş

ID

Description

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pSPORT; Site_1: NotI; Site_2: SalI; cDNA
library was derived from untreated inflorescence tissue
from Arabidopsis thaliana, Columbia Col-0, at 4 - 7
weeks. Plants were grown in 1:1: peat
moss/vermiculite/perlite soil at 22 deg. C +/- 3 deg. C
under constant light, and watered with fertilizer. cDNA
synthesis was initiated using a NotI-oligo(dT) primer.
Double-stranded cDNA was blunted, ligated to SalI adaptors
/digested with NotI, size-selected, and cloned into the
NotI and SalI sites of the pSPORT vector."

first strand synthesis primer was used. An anchor nucleotide (V=A, C, or G) was added to the 3' end of the primer (GAGAGAGAGAGAGAGAGAGAGAGAGAGTAGTCTGAG(GT)18) to anchor the primer at the 5' end of the poly(A) tract. After second- strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The KhoI site within the first-strand synthesis primer was then restricted by digestion with KhoI; all KhoI sites in the CDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500 bp cutoff, using GibcoBrL Life Technologies' CDNA Size Fractionation column. The column eluent was then ligated into Stratagener's pBluescript(tm) II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI
                                                                                                                                                                                                                                                                                                                                                                                                                                                 /mote="Vector: pBluescript II SX4; Site_1: EcoRI; Site_2: XhoI; This cDNA library was constructed from mRNA isolated from cotyledons of 3 and 7-day-old williars seedlings which were propagated on paper towels with distilled water. The cotyledons were flash frozen in liquid nitrogen, then lyophilized for 72 hours. Unequal amounts of mRNA was used for cDNA gynthcois. Strangene's cDNA Synthexix Kit (catalog number 200401) was used to synthesize the cDNA. First stranded synthesis was performed with 5-methyl dCTP, hence the lighted cDNA was hemimethylated. A modification of Stratagene's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Shoemaker R/Public Soybean EST Project

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         //www__was isolated from roots of 7 day cld
'Bragg' seedlings that were mock-infected 48 hours prior
to harvest. Dr. Gary Stacey generously donated the
tissue. The roots were flash-frozen in liquid nitrogen.
Stratagene's cDNA Synthesis Kit (catalog number 2004])
was used to synthesis Kit (catalog number 2004])
was used to synthesis Kit (catalog number 2004])
was hemmethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (VA, C, or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18V] to anchor
the primer at the 5' end of the poly(A) tract. After
second-strand synthesis, the cDNA ends were filled in with
cloned Pfu DNA, ligated to EcoRI adapters and subsequently
phosphorylated. The cDNA was then precipitated and
redissolved in sterile, RNase-, DNAse-free water. The XhoI
site within the first- strand synthesis primer was then
restricted by digestion with XhoI from promega (400/ull);
all XhoI sites in the cDNA constructs were
size-fractionated with a 500bp cutoff, using Sehactyl
S-500 High Resolution (Pharmacia Biotech) in a 2-em
column eluent was precipitated, redissolved, and ligated
into Stratagene's phluesoript II XR Predigested vector
(phluesoript II SK(+) vector that has been digested with
EcoRI and XhoI, and phosphorylated by Stratagene). This

note="Vector: pBluescript II SK+; Site 1: ECORI; Site 2: hol; The cDNA library was constructed from mNA isolated from 11 day old seedlings treated with that were treated ith 2 ugs/ml of a crude glucan elicitor preparation schated from the mycelial walls of Phytophthora sojae. The library was prepared using the Stratagene pBluescript ISK(+) library construction kit. Complementary DNA was ynthesized from mRNA using a primer consisting of a oly(dT) sequence with an XhoI restriction site. EcoRI

                                                                                      482
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DHIOB host cells. Plant material was provided by Michael G. Hahn (Complex Carbohydrate Research Center, University of Georgia) and the library was constructed by Anu Khanna (Lila VcdX:n lab , University of Illinois)."
